REGAL HORNED LIZARD

Description: The Regal Horned Lizard is brown. It can change colors to blend in with the environment.

Habitat: Desert because they have sticky tongues that they can get bugs with. They can blend in with the rocks.

Diet: Carnivore because they like to eat other animals like a rattlesnake. They also eat bugs with there sticky tongues.

Patience

FENNEC FOX

Description: The Fennec Fox is the smallest fox , it is 1.2 meters, 2.2 pounds, or 1 kilogram. If you measure it, it will be 6 inches wide. They could be called a desert fox because it lives in North Africa.

Habitat: The Fennec Fox lives in the desert. These foxes dwell in small groups up to ten individuals.

Diet: The Fennec Fox is an omnivore. Which means it eats meat and plants and reptiles and insects.

Emma

GREY WOLF

Description: Wolves live in groups called a pack, a family of 7 to 8. Wolves with a mom and dad and offspring. The wolves communication skills are very important to the pack.

Habitat: Wolves live in forest, mountains, grasslands, and the arctic. In some areas Grey Wolves are classified as endangered, but in most places they are seen to have healthy population numbers.

Diet: Wolves eat meat and deer, they hunt as a pack.

Savannah

GROUNDHOG

Description: The Groundhog is brown with black eyes and a brown tail. The Groundhog is also known as a woodchuck. It spends most of its day alone. When it's in brown dirt that protects them from their predators because they are camouflaged.

Habitat: The Groundhog's habitat is in the forest. It is in its burrow in the forest.

Diet: The Groundhog eats plants. It doesn't eat meat or anything else.

Lucas

NARWHAL

Description: A Narwhal has a tusk. Their tusk breaks the ice.

Habitat: They live in the Antarctic Oceans. They swim in the water.

Diet: They eat fish, that is meat.

Christopher

GILA MONSTER

Description: The Gila monster colors are all black with usually pink orange or yellow stripes. They are venomous lizards. They are more likely to use their venom on predators than prey. They clamp their jaws down with the power of a vice grip.

Habitat: Their habitat is in the middle of the south western desert in Mexico.

Diet: They eat eggs whole and newborn animals such as rabbits and squirrels.

Kierstin

HEDGEHOG

Description: Hedgehogs look like prickly balls. When you pet them they feel rough. They are very harmful if your are not safe while handling them.

Habitat: A hedgehog lives in the forest or in an open field. Sometimes even in a garden or a backyard.

Diet: Hedgehogs diet is usually insects, bugs, tiny mice, lizards, or snake eggs.

Dean

CALIFORNIA SEA LION

Description: The California Sea Lion are intelligent and social species. They travel in groups of twelve or more. They hang out on man made structures.

Habitat: Their habitat is sandy beach and rocky areas to breed.

Diet: Their diet includes fish, shellfish, and squid.

Abigail

PIG

Description: Pigs are pink. Some Pigs are brown. Pigs can live 12 to 27 years. Pigs are heavier than a Piano. Pigs have skinny legs.

Habitat: They can live at a farm. They can also live in the grasslands.

Diet: Pigs are omnivores. They eat leaves or rodents and small reptiles.

Makenna

HARP SEAL

Description: Harp Seals are famous for their snowy white coats. Harp seals spend most of their time diving and swimming in the Atlantic and Arctic Oceans. Polar Bears are carnivores just like Harp Seals.

Habitat: Harp Seals are seen in the Atlantic and Arctic Oceans for thirty years! They swim in the icy waters of the north.

Diet: Harp Seals eat fish and crustaceans. The pups go without food for about six weeks until they dive and hunt for themselves.

Avery

VAMPIRE BAT

Description: Vampire Bats look like a flying wolf with sharp teeth.

Habitat: Vampire Bats live in the forests of Central and South America.

Diet: Vampire Bats drink the blood of mammals.

Najah

SPIDER MONKEY

Description: Black Spider Monkeys have long thin arms with hook like hands that allow them to swing through the trees. They do not have opposable thumbs. They are strong enough to hang on their mother's backs.

Habitat: Spider Monkeys live in the forest. They also live in the wild. They have no owner. They go places to get food to eat so they don't die. They need to live, if they are girls their babies will die.

Diet: They eat animals like fish. They also eat omnivore diets. They can always eat things they find in the forest. Because that is where they live.

Rocco

KING COBRA

Description: A King Cobra is very powerful, once it sees the rat it strikes at the rat. King Cobras are venomous, it can grow up to eighteen feet long. The snake tries to act tough by expanding its ribs to make a hood making it look bigger.

Habitat: The Cobra lives in Southeast Asia, in rainforests.

Diet: Cobras eat rats and reptiles, along with little mammals and eggs. It's even possible that the Cobra eats other snakes and birds.

Taylor

BLACK WIDOW SPIDER

Description: A female Black Widow has a red hour glass on it's bottom and is shiny black. A female and male Black Widow only see each other when they breed.

Habitat: They live on a web on a tree or on a branch or they might be living on the side of your house.

Diet: Black Widows are shorter than a tea spoon, they are more narrow than a penny. Black Widows are poisonous. A female Black Widow eats the male too.

Rae'lynn

RETICULATED GLASS FROG

Description: It is a small frog the length of a quarter. It leaps from one plant leaf to another, flaunting its little belly as it soars. The skin on the frog's underside is see-through.

Habitat: Reticulated Glass Frogs can be found in the rain forests of Costa Rica, Panama, Colombia, and Ecuador. These animals, which are active at night, inhabit vegetation along streams. Males can get pretty territorial, making squeaking noises to warn trespassing frogs to stay away from their leafy hangout spots. If an intruder doesn't leave, the frog will wrestle it to show it who is boss.

Diet: These frogs are carnivores, which means they are meat eaters.

Samani

CHEETAH

Description: The fastest mammal on land, the Cheetah can reach speeds of sixty or perhaps seventy miles per hour or over 113 kilometers an hour over distances. It usually chases its prey.

Habitat: Cheetahs live and hunt mainly in open grassland and bushy areas in parts of Africa and the Middle East.

Diet: Cheetahs eat small-size animals such as Mares, Impalas, Wildebeest, and Gazelles.

Justin

PRAIRIE DOG

Description: Prairie Dogs bark like dogs that how they got their name. The Prairie Dog is related to the squirrel. To greet another Prairie Dog they rub their noses together.

Habitat: In a hole, in North American, called Dog Lands, under the grasslands lives the Prairie Dog. Their predators are coyotes and snakes.

Diet: They have a herbivore diet.

Eleanor

SNOWY OWL

Description: When you see a Snowy Owl its clear how the bird is probably got it's name. They're snow-white! Males are generally whiter than females.

Habitat: These large owls mainly live in the open treeless areas called tundras. Snowy owls perch on the ground or a short post.

Diet: Snowy Owls have great eye sight, but can't see it's prey when it's underneath snow or thick layers of plants.
