LabCorp Home Testing

The COVID-19 test home collection kit to detect an active COVID-19 infection is available through Pixel by LabCorp, a platform where patients can request many routine lab tests, and the required physician order, online. The COVID-19 test home collection kit is available to individuals who complete an online eligibility screening questionnaire. Visit Pixel by LabCorp™ to learn more,

<https://www.pixel.labcorp.com/covid-19>.

Antibody Test

This test detects antibodies to see if you have been exposed to COVID-19 (past infection).

Antibody test will not tell you if you have immunity.

LabCorp

Individuals have the ability to receive the COVID-19 IgG antibody test from their doctor, in person or through a telemedicine program, and now directly using

www.LabCorp.com/antibody-testing.

Quest

You can make an appointment at a Quest patient service center for an immune response test,

<https://appointment.questdiagnostics.com/patient/confirmation>. However, your doctor must have submitted an order for your test or you

must have purchased one through QuestDirect.

Plasma Donation Sites

If you have fully recovered from COVID-19, you may be able to help patients currently fighting the infection by donating your plasma. Because you fought the infection, your plasma now contains COVID-19 antibodies. These antibodies provided one way for your immune system to fight the virus when you were sick, so your plasma may be able to be used to help others fight off the disease.
